Skills

Personal Skills

- Motivated
- Passionate
- Great Communication
- Self Motivated
- Teamwork
- Conflict Resolution
- Adaptability
- Leadership
- Ability to Work Under Pressure
- Time Management
- Creativity
- Decision Making
- Personable

Languages

- Ruby
- JavaScript
- HTML 5
- CSS3
- PHP
- Jquery
- React Js
- Python

Tools

- Github
- Git
- Database Migration
- Endeca Search
- Heroku
- Shopify
- TDD

Frameworks

- Django
- Ruby on Rails
- Bootstrap
- Restful API
- Ajax
- D3 Visualizations
- SQLite3
- PostgreSQL
- Node
- Express.js

Operating Systems

Summary

I'm a motivated, fast learner offering the ability to adapt quickly in a working environment. I have experiences in all stages of web development processes including: dev ops, planning, design, development, testing, and delivery. I am seeking a developer position that will allow me to build upon my current skill set to evolve into a trusted asset in a creative, collaborative and challenging environment. Competent with a wide variety of programming languages and web tools. Passionate about technology, problem solving and entrepreneurship.

Work experience

June 2016 - Present

Front End Developer

The Sort Group

Build web applications utilizing react.js, Node, html, css, scss and Javascript.

Some of my latest projects include:

- Newsletter Web Application that uses node, express.js and request.js to post data to mailchimp and allows users to subscribe to your mailchimp email subscription.
- Utilized custom html, react.js, css, scss & Javascript in order to create said application.
- Responsive Portfolio site (Github) built in react.js, html & css.
- Utilized flexbox css for container elements to provide responsiveness.
- Built Custom Templates utilizing HTML, SCSS, JavaScript and PHP.
- Assisted in development of back end features in PHP.
- Coordinated design features with lead Designer & Developer utilizing Adobe Photo Shop & Pixlr.
- Assisted with implementation of content and copy with the Digital Marketing Coordinator.

Jan 2020 - April 2020

Student

Momentum Learning

At Momentum, I was on a team with 3 classmates putting together our final project, a Django application.
We had to build our working prototype in just a week and had to teach ourselves the Vue framework in order to get it done on time with the UX we wanted.
We conducted the project using Agile, tracking our tasks and progress on Trello. We continually assessed our priorities to ensure the highest impact features were completed by the deadline.
We delivered an application on time that looked polished and was easy to use. We got great feedback from industry representatives on our Demo Day.

May 2017 - June 2018

Front End Developer

Vitacost.com

As a Front End Developer for Vitacost, I made consumer-facing changes to a high traffic e-commerce site. Prior to beginning the development process, I collaborated with UI, design and marketing team members to ensure both technical feasibility and the re-usability of new UI components. I then turned mock-ups into fully responsive and cross-browser compatible pages by hand-coding HTML, CSS and JavaScript. Because I believe the success of an organization depends on good communication and mentorship, I worked to improve cross-team collaboration by setting up Lunch & Learns to share technical knowledge across different departments.

Some of my most notable accomplishments included:

- Building a Pinterest style blog board (nested in tabs) in order to both increase conversion and integrate blog content without having the user leave our site.
- Bringing our mobile site in-house without causing a dip in conversion. This move reduced the cost of ownership and significantly decreased

- Mac
- PC
- Windows
- Unix

the turnaround time on new feature implementations and bug fixes.
- Establishing a QA process for the CMS team's page build process, leading to a decrease in rework and improved efficiency.
- Mentoring teammates through pair programming, onboarding training and study sessions utilizing React and other Javascript libraries.

Education

Aug 2015 -
Nov 2015

The Iron Yard
- Immersive 12 week coding boot camp requiring 60 – 80 hours per week focused on Ruby on Rails.
- Collaborated with other developers, working numerous paired programming projects, to establish a competent coding skill set with the ability to launch scalable, functional full stack applications.

Oct 2000 -
Nov 2008

Chemical Operations Specialist
United States Army - 19th Special Forces Group (Attached)
- Eight years of management experience, supervising multiple soldiers. Provided operational & logistical support for supervising units.
- Provide reconnaissance and surveillance for units of up to 250 people and more.
- Maintain team cohesion to insure safe redeployment of all personnel.
- Coordinate with other units in the area of operation to guarantee mission success.
- Managed written correspondence, drafted & submitted requests for support, personnel & supplies for top level management.
